         The invention relates to a recombinant vector containing alpha-glucosidase gene derived from buckwheat. A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.
                                                                                                                                                                   65

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               231
                                                                                                                                                                                                                                                                                                                                                                                                                                                         65
                                                                                                              The invention relates to a recombinant vector containing alpha-glucosidase gene derived from buckwheat. A transformant containing the recombinant vector can be used for preparing alpha-glucosidase by culturing the transformant and isolating alpha-glucosidase from the culture. This sequence represents a buckwheat alpha-glucosidase protein.
                                                                                                                                                                                                                                                                                                                                                                                                            67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LYRTLLSSPTTNRRKILLSHPNSDLTFSLINTTPFGFTISRKSTHDVLFDA-TPDPTNPN

This invention describes a novel potato alpha-glucosidase (I). (I) is used to produce transgenic plants (or plant or bacterial cells) that used to produce transgenic plants (or plant or bacterial cells) that produce starch with modified degrees of branching, amplose/amplopertin cartio, phosphate content, starch granule size and/or sidechain structure, and thus altered physical and chancial properties. This starch is used for all usual applications, particularly in preparation of foods. Dackaging materials and disposable articles, but also for hydrolysis to glucose (for manufacture, in adhesives; for treating textiles; for soil paper/pulp manufacture; in adhesives; for treating textiles; for soil catabilization; as wenting agent in pharmaceuticals and cosmetics; as additive for rubber, building materials, leather and in casting; as floctulant for soil or coal slurries; and in polymers, as simple filler or reactive component, e.g. in polymersen, we simple filler produced using plants that contain (I) are easily hydrolyzed, reducing the requirement for expensive enzymes. This sequence represents the

                                                                                                                                                                                                                                                                               This sequence represents a novel barley alpha-glucosidase protein. Recombinant alpha-glucosidase can be used to increase the rate of starch grain hydrolysis when used together with alpha-amylase or can supplement glucoamylase in industrial starch hydrolysis systems. Useful DNA sequence characteristics from this enzyme can be identified which can be used as hybridisation probes for identifying germplasm with high levels of efficient hydrolytic enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 415

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compression expression levels of particular genes (ABI92202 to ABI99912, encoding the protein sequences in ABB57020 to ABB9912, encoding the protein sequences in ABB57020 to ABB97314) or by determining the expression profile of a gene group comprising these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic condition improving drugs or therapeutics for ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     329 TWRSTGGILDVYVFLGPEPKSVVQQYLDVVGYPFMPPYWGLGFHLCRWGYSSTAIVROVV 388
                                                                                                                                                                                                                                 Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

The invention describes the recombinant GLA2 enzyme, which is useful for hydrolysing carbohydrate-containing materials, especially materials containing rice carbohydrates. The glucoamylase is used to produce glucose and alcohol from starch containing raw materials. GLA2 is useful for hydrolysing

By inserting at least one of the enhancer elements into a promoter region which is functional in fungi, the activity of the promoter is enhanced Using such improved promoters, a gene of interest can be expressed efficiently in transformed fungi. The present sequence is encoded by the agdA gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fungal DNA enhancer element - used to transform other host fungus

Deletion from the N- or C-terminal reduces Grase extivity of the protein. Specifically, glucoamylase with reduced Grase activity can be prepared. The full-length Grase structural gene was isolated as a 4.3kb Sphl fragment from chromosomal DNA of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29,4%; Score 1401.5; DB 14; Length 985; 33,4%; Pred. from recombinant DNA of Aspergillus niger
                                                                                                                                                                                                                                                                                          Glycosyltransferase was prepared from a culture of A. niger containing recombinant DNA encoding GTase (AAQ50468). GTase can lobtainted effectively using this method and in larger quantities. The probes (AAQ50466-67) were used to detect transformants containing the GTase gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GLWI DMINEI SNF------

The present sequence represents a sugar transferase protein of Acremonium sp. 54G13. The protein preferably catalyses the glucose transfer of an alpha-1 right arrow 3 bond or the glucose transfer of an alpha-1 right arrow 3 and an alpha-1 right arrow 4 bond to a sugar receptor by reacting with a substrate selected from starch and its decomposition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     217

                                                                                                                                             S contains all or part of one of the sequences represented in AAQ06383-87.
Fis e.g. a cellulase, interleukin, insulin-like-growth factor, interferon etc.
T is pref. all or part of the terminator of this sequence (bp 2875-3120).
GAM1 acts as selective marker for the vector carrying the expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
S), a foreign protein sequence (F) and a terminator (T)
and/or S and/or T are derived from the glucoamylase gene
sequence (S), a foreign protein sequence (F) and a terminator (T) of which R and/or S and/or T are derived from the glucoamylase gen of S. occidentalis.
R is pref. a 1.3 kb BamHI-PvuII fragment (bases -1 to -320 of this

One positive cosmid (32kb; pxc1) was digested with EcoRI, religated and used to transform E.Coli JA221. A GA-contg. cosmid (about 40 kb) was isolated. This was cut with BamHI and religated to give the plasmid pcJD5-AMG1 contg. a 12kb fragment (in AAN@1526).
